

Before Monday's class, please complete the following. If you have any technical difficulties, please email Anahita at abahri@bu.edu. Otherwise, find her after class on Monday to resolve any issues so that we're ready to go on Wednesday.

1. Download PostgreSQL **Version 9.5.5** [here](#). Note that PostgreSQL will install pgAdmin (client application).
 - a. During the download, you will create a superuser password. Although you won't be required to use your password for the class, you may need it moving forward.
 - b. Ignore the 'Stack Builder', which gives you the opportunity to download additional components, extensions, drivers, and applications. You do not need to download this.
2. Connect to the GA server via pgAdmin. Follow [these directions](#) after you've installed PostgreSQL / pgAdmin.
3. For Wednesday: Familiarize yourself with SQL and databases by watching this brief [video](#).
